

DON'T LET MOISTURE RUFFLE YOUR FEATHERS

RMAX® BELOW GRADE INSULATION AND PROTECTION BOARD

All building foundations come in contact with the ground. Wherever a building is located, water, temperature, air and soil on the foundation can impact the performance and integrity of the total structure. Continuous polyiso rigid foam insulation is an effective way to reduce foundation energy loss and protect against moisture problems.

Rmax® Below Grade insulation and protection board delivers a high R-value per inch, excellent moisture resistance and superior foundation protection - all in one solution for below-grade exterior walls.

ALWAYS RELIABLE. INCREDIBLY EFFICIENT

Rmax® Below Grade Insulation & Protection Board

DURABLE FACER, ADDED PROTECTION

Rmax® Below Grade has a high-strength, water-shedding facer for added foundation protection.

ACHIEVES THERMAL PERFORMANCE

Higher R-value per inch compared to XPS & other insulation. Rmax® Below Grade meets requirements with a thinner profile.

RESISTS WATER ABSORPTION

The closed-cell & closed matrix of Rmax® Below Grade foam board meets water absorption requirements, with less than 0.3% absorption.

HIGH COMPRESSIVE STRENGTH

At 25 psi, Rmax® Below Grade resists pressures from soil loads that act on the foundation wall, while maintaining superior thermal performance.

FAMILIAR PROCESS. LESS MATERIAL.

Rmax® Below Grade uses the same installation method with **LESS** material, **MORE** protection
